

Restaurant OUTPOST Zurich, with ingenious culinary and logistic ideas

The newly opened restaurant OUTPOST in Zurich's zoological garden, a first class address, spoils their guests with excellent food and exquisite wines. The creative crew offers the guests specialities from Switzerland and countries.

Not only the food and drinks offered are special, also the implemented solution for the transport of the food from the kitchen to the dining room which proves a lot of imagination and cleverness.

The building has two floors. The gourmet-restaurant is located on the ground floor and on the first floor is the kitchen as well as the zoo-restaurant.

The responsible persons have invested a lot of time into the organization on the one hand, into the kitchen equipment and into an optimal sequence of the food-flow on the other hand. Besides many smart equipment there has been installed a paternoster-system from Kardex as means of transportation between the kitchen and the dining room.

In the kitchen area the trays will be loaded with the meals. Several trays can be prepared at the same time in comparison with the conventional elevator systems . – With one push of a button the paternoster drives the loaded trays to the access opening in the restaurant. An acoustic signal alerts the personal when the trays with the meals are available. The advantages of this system over a conventional elevator system are particularly in the capacity and speed of transporting and the food.

The access opening is equipped with a smoke detector and a fire door, which closes automatically in case of fire so that the fire cannot spread out in the upper floors.

Within the kitchen area a fold away tabel has been

installed, which can be folded down at any time e.g. when cleaning the kitchen.

The system in the restaurant OUTPOST proves, how various the application for Kardex systems are. Kardex is able to realize besides the various standard versions of rotating carousels, shuttle and horizontal-roundabouts also solutions for individual machines.

Kardex, in addition to the large variety of dynamic stocks- and supply- systems, develops customized software for storage units and other control systems, in order to serve the customers needs worldwide with highest quality.

KARDEX – no limits !
